The Learning Cycle is a process that our teachers follow. It helps them provide a quality education for your children.

1. OUTCOMES
Student learning improves when the student clearly understands what they need to know and do.

ASK THE TEACHER
How can I tell if my child knows if he/she understands what the learner outcomes are at the beginning of each lesson?

2. PRACTICES
The more students are engaged in their lessons, the more they will learn and understand what they need to know.

ASK THE TEACHER
What can I do to help you engage my child in his/her school work?

3. ASSESSMENT
Practice helps students learn, and not all assignments need to be given a mark to be considered important.

ASK THE TEACHER
What assignments were used to help my child understand what he/she needs to know and do?

4. EVALUATION
When teachers know that students understand the outcome a final assessment is given for grades.

ASK THE TEACHER
How will I know what assessments are practice and what assessments are for grades?
